

Hello, I'll be brief. Broadband over Power Lines will likely cause the demise of Amateur Radio. Approving this system would be a slap to the society of people who have been on the forefront of radio technology for decades and have volunteered their service to all of us during emergencies --at no charge. BPL threatens to virtually eliminate reception of the most usable and useful Amateur Bands. BPL also seems to be a cumbersome method to provide internet service, so is it really warranted? Especially when the cost to freedom of so many people will be jeopardized. Please carefully look at all of the consequences of approving BPL before rendering a decision.

Thank you
Russ Williams
